ELANCO^{AF1300} TYLAN TYLOSIN TARTRATE SOLUBLE

Active Constituent: Not less than 800mg/g TYLOSIN as the tartrate

Water Soluble Antimicrobial

As an Aid in the Prevention and Treatment of Chronic Respiratory Disease in Broilers and Replacement Chickens, Infectious Sinusitis in Turkeys and Swine Dysentery in Pigs. For the Prevention and Control of Ileitis associated with susceptible strains of *Lawsonia intracellularis* in Pigs.

Contents: 100g (1kg, 55kg) TYLOSIN as the tartrate. Minimum 100g (1kg, 55kg NET)

DIRECTIONS FOR USE:

Medicated feed containing tylosin should not be administered at the same time as water medication. NOT TO BE USED in birds producing eggs for human consumption.

Mixing Directions: Add at the rate of 100g to 5 litres of water and dissolve thoroughly. Further dilute this concentrated solution as per the dosage recommendations below. Prepare a fresh TYLAN solution every three days.

Dosage Recommendations:

PIGS: *As an aid in the treatment of swine dysentery:* Further dilute the concentrated solution to provide 400 litres of medicated drinking water and treat for 3 to 10 days. Treatment should be continued until 24 hours after the cessation of symptoms.

For the prevention and control of ileitis associated with the susceptible strains of Lawsonia intracellularis: Further dilute the concentrated solution to provide 1600L or 800L of medicated drinking water (i.e. 53 or 100 mg tylosin/L). This dilution provides a dose rate of 5.3-10 mg/kg bw/day for pigs drinking water equivalent to 10% of their liveweight each day. Medicated water should be provided as the sole source of drinking water for 7 days.

CHICKENS AND TURKEYS: Further dilute the concentrated solution to provide 200 litres of medicated drinking water. Provide as the only source of drinking water.

Chickens: As an aid in the prevention and treatment of chronic respiratory disease in broilers and replacement chickens.

PREVENTATIVE: Treat for the first three days of life. Repeat treatment for one day at 3 to 4 weeks of age, or to coincide with live virus vaccine or other stress.

THERAPEUTIC: Treat for 3-6 days depending on the severity of infection.

Turkeys: As an aid in the treatment of infectious sinusitis. Treat for 2 to 5 days depending on the severity of infection.

Any variation by the prescribing veterinarian to the approved dose, frequency, duration, route, disease or target species may result in the need to extend the approved withholding period.

WITHHOLDING PERIODS:

MEAT – Zero (0) days.

EGGS – NOT TO BE USED in birds producing eggs for human consumption

DISPOSAL: Shake and empty contents into medicated water. Do not dispose of undiluted chemicals on site. Puncture or shred and bury empty containers in a local authority landfill. If not available bury the containers below 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, vegetation and roots. Empty containers and product should not be burned.

SAFETY DIRECTIONS:

Repeated exposure may cause allergic disorders. Avoid contact with skin. Do not inhale dust. When opening the container, preparing product for use and mixing, wear cotton overalls buttoned to the next and wrist (or equivalent clothing), elbow-length PVC gloves and disposable dust mask covering face and nose. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water. After each day's use, wash gloves and contaminated clothing.

FIRST AID: If poisoning occurs, contact a doctor or the Poisons Information Centre. Ph. (Australia) 13 1126.

Additional information is in the Material Safety Data Sheet.
